CONTENTS

Abstract 1
Introduction 1
Theory of specific conductance 1
    Electrical resistance and conductance 1
    Definition of conductivity 2
    Potassium chloride secondary standards 2
    Temperature effects and instrumental temperature compensation 3
    Ionic conductance 6
        Concentration relationships 7
        Temperature relationships 8
    Effects of complexation and protonation 9
Applications to analytical quality control 10
    An empirical approach in natural waters 10
    Tests of the empirical model 11
        Adjustments for effects of complexation 11
        Calculation of the sum of conductance and the exponential correction factor (f) 11
        Evaluation of f 11
    Quality control checks 12
        Comparison of measured with computed specific conductance and anions with cations 12
        Predicting the sum of anions or cations 13
    A special case for seawater and estuarine waters 13
Notes on specific conductance measurements 14
    Instrumentation 14
    Procedures 14
