Contents

Chapter 1 **Chemical Pollution of the Aquatic Environment by Priority Pollutants and its Control** 1
B. Crathorne and A. J. Dobbs

1 Introduction 1
2 Direct Discharges 2
2.1 Chemicals covered by the Dangerous Substances Directive—Black and Grey List Chemicals 3
2.2 Red List Chemicals 6
3 Diffuse Sources 9
3.1 Acidity 9
3.2 Nitrates 10
3.3 Pesticides 12
4 Sources, Fates, and Analysis 13
4.1 Atrazine 14
4.2 Azinphosmethyl 15
4.3 1,2-Dichloroethane 16
4.4 Endosulfan 16
4.5 Tributyltin Oxide 16
5 Conclusions 18

Chapter 2 **The Chemistry of Metal Pollutants in Water** 19
D. R. Turner

1 Introduction 19
2 Metal Pollutants in Perspective 20
3 Chemical Speciation of Metal Pollutants 21
3.1 Inorganic Complexation 23
3.2 Organic Complexation 25
3.3 Adsorption 26
3.4 Redox Processes 28
3.5 Biological Availability 29
4 Monitoring of Metal Pollutants 29

4.1 Chemical Measurements 30
4.2 Modelling 30
4.3 Bioassay Measurements 31
5 Concluding Remarks 31

Chapter 3 Sewage and Sewage Sludge Treatment 33
J. N. Lester
1 Introduction 33
1.1 Objectives of Sewage Treatment 34
1.2 The Importance of Water Re-use 35
1.3 Criteria for Sewage Treatment 35
1.4 Composition of Sewage 36
2 Sewage Treatment Processes 37
2.1 Preliminary Treatment 38
2.2 Primary Sedimentation 39
2.3 Secondary (Biological) Treatment 41
2.3.1 Percolating Filter 42
2.3.2 Activated Sludge 44
2.3.3 Dispersed Aeration 49
2.3.4 High-rate Activated Sludge 50
2.3.5 Conventional Activated Sludge 50
2.3.6 Extended Aeration 51
2.3.7 Contact Stabilization 51
2.3.8 Nitrification 51
2.4 Secondary Sedimentation 52
3 Sludge Treatment and Disposal 53
3.1 Anaerobic Digestion 54
3.2 Dewatering of Sludge 56
3.3 Disposal of Sewage Sludge to Land 58
4 Bibliography 62

Chapter 4 The Treatment of Toxic Wastes 63
A. James
1 Introduction 63
2 Sources and Types of Toxic Wastes 64
3 Toxicity Problems in the Collection System 64
4 Pre-treatment of Toxic Wastes 64
5 Primary and Secondary Treatment 70
6 Sludge Treatment and Disposal 72
7 Disposal of Toxic Wastes 73
8 Industrial Waste Treatment—Case Studies 74
8.1 Tannery Wastes 74
8.2 Metal-processing Wastes 77
8.2.1 Ion Exchange 79
8.2.2 Evaporation 80
8.2.3 Reverse Osmosis 80

8.2.4 Solvent Extraction 80
8.2.5 Electrodialysis 80
9 Bibliography 81

Chapter 5 Water Quality and Health 83
R. F. Packham
1 Introduction 83
2 Drinking Water Standards 84
3 Lead 84
4 Nitrate 85
5 Water Quality and Cardiovascular Disease 86
6 Organic Micropollutants 89
7 Wastewater Re-use and Health 92
8 Organic Compounds and Disinfection 93
9 Organic Contamination of Drinking Water in Distribution Systems 94
10 Other Inorganic Constituents 94
10.1 Aluminium 95
10.2 Asbestos 95
10.3 Fluoride 96
10.4 Sodium 96
11 Conclusions 96

Chapter 6 Biological Aspects of Freshwater Pollution 99
C. F. Mason
1 Introduction 99
2 Organic Pollution 100
3 Eutrophication 104
4 Acidification 108
5 Toxic Chemicals 111
6 Thermal Pollution 118
7 Oil 119
8 Radioactivity 120
9 Biological Monitoring of Pollution in Freshwaters 121
10 Conclusions 125

Chapter 7 Important Air Pollutants and Their Chemical Analysis 127
R. M. Harrison
1 Introduction 127
1.1 Pollutant Cycles 127
2 Specific Air Pollutants 131
2.1 Sulphur Dioxide 131
2.1.1 Chemical Analysis of Sulphur Dioxide 133
2.2 Suspended Particulate Matter 135

2.2.1 Metals in the Atmosphere 140
2.2.2 Chemical Analysis of Particulate Pollutants 141
2.3 Oxides of Nitrogen 143
2.4 Carbon Monoxide 146
2.4.1 Chemical Analysis of Carbon Monoxide 147
2.5 Hydrocarbons 148
2.5.1 Chemical Analysis of Hydrocarbons 149
2.6 Carbon Dioxide 151
2.7 Secondary Pollutants 151
2.7.1 Ozone 151
2.7.2 Peroxyacetyl Nitrate (PAN) 153
3 Indoor Air Quality 154
4 Appendix 155

Chapter 8 Chemistry of the Troposphere 157
R. M. Harrison
1 Introduction 157
2 Atmospheric Chemical Transformations 161
2.1 The Importance of the Hydroxyl Radical (OH) 161
3 Atmospheric Oxidants 162
3.1 Formation of Ozone 162
3.2 Formation of PAN 164
4 Atmospheric Acids 167
4.1 Weak Acids 167
4.2 Strong Acids 167
4.3 Sulphuric Acid 167
4.4 Nitric Acid 169
4.5 Hydrochloric Acid 170
4.6 Methanesulphonic Acid (MSA) 171
5 Atmospheric Bases 171
6 Atmospheric Aerosols 172
7 The Chemistry of Rainwater 176

Chapter 9 Chemistry and Pollution of the Stratosphere 181
I. Colbeck and J. C. Farman
1 Introduction 181
2 Stratospheric Ozone 182
3 Natural Sources of Trace Gases 188
4 Anthropogenic Sources 189
5 Multiple Perturbations 191
6 Antarctic Ozone 193
7 Summary 198
8 Bibliography 198

Chapter 10 Atmospheric Dispersal of Pollutants and the Modelling of Air Pollution 201
M. L. Williams
1 Introduction 201
2 Dispersion and Transport in the Atmosphere 202
2.1 Mechanical Turbulence 202
2.2 Turbulence and Atmospheric Stability 202
2.3 Mixing Heights 205
2.4 Building and Topographical Effects 205
2.5 Removal Processes – Dry and Wet Deposition 207
3 Modelling of Air Pollution Dispersion 207
3.1 Modelling in the Near Field 208
3.2 Emission Inventories 212
3.3 Long Range Transport 216
3.4 Accuracy of Models 218

Chapter 11 Catalyst Systems for Emission Control from Motor Vehicles 221
G. J. K. Acres
1 Introduction 221
2 Exhaust Emissions from Motor Vehicles 222
3 The Use of Catalysts for Emission Control 224
3.1 The Carbon Monoxide/Hydrocarbon Oxidation Catalyst Concept 225
3.2 Dual Bed and Threeway Catalyst Concepts 225
3.3 Lean Burn Catalyst Systems 227
4 Air Quality Standards 228
5 Advanced Emission Control Technology 231
5.1 Diesel Exhaust Emission Control 231
5.2 Catalytic Combustion 232
5.3 Electrically Powered Vehicles 235
6 Conclusions 236

Chapter 12 Effects of Gaseous Pollutants on Crops and Trees 237
T. A. Mansfield and P. W. Lucas
1 Introduction 237
2 Current Knowledge of the Mechanism of Action of Some Major Pollutants 238
2.1 Sulphur Dioxide 238
2.2 Nitrogenous Pollutants 242
2.2.1 Responses to Gaseous NO_x 243
2.3 Ozone 245
2.4 Acid Rain and Acid Mist 249
3 Interactions between Pollutants 251

3.1 Mixtures of SO_2 and NO_2 251
3.2 Mixtures of SO_2 and O_3 252
4 Pollutants/Stress Interactions 253
4.1 Biotic Factors 253
4.2 Abiotic or Environmental Factors 255
4.2.1 Low Temperatures 255
4.2.2 Water Deficits 257

Chapter 13 The Health Effects of Environmental Chemicals 261
H. A. Waldron
1 Introduction 261
2 Catastrophic Exposure 262
3 Endemic Exposure 264
3.1 Mercury 265
3.2 Hexachlorobenzene 266
3.3 Cadmium 266
3.4 Triorthocresyl Phosphate (TOCP) 267
3.5 Toxic Oil Syndrome 267
3.6 Polychlorinated Biphenyls (PCBs) 268
3.7 Polybrominated Biphenyl (PBB) 269
3.8 Dioxin 271
3.9 Lead 271
4 Concomitant Exposure 272
5 Conclusions 275

Chapter 14 The Legal Control of Pollution 277
R. Macrory
1 Functions and Characteristics of Pollution Law 277
2 Sources of Law 279
3 Underlying Characteristics of British Pollution Laws 281
4 Waste Disposal on Land 282
4.1 The Control Framework 282
4.2 Site-Licensing 283
4.3 Tracking System for Movements of Waste 284
4.4 Imports and Exports of Wastes 284
4.5 Enforcement of Consistent Standards 285
5 Industrial Air Pollution 286
5.1 Prescribed Classes of Work 286
5.2 The Clean Air Acts 287
5.3 EEC Legislation and Future Directions 288
6 Water Pollution 289
6.1 Consent Based System 289
6.2 EEC Directives 291
6.3 Future Administration Arrangements 292

7 Recent Trends in Pollution Legislation 293
7.1 Public Involvement 293
7.2 Land-use Planning and Pollution Control 293
7.3 Integrated Pollution Control 294

Chapter 15 The Control of Industrial Pollution 297
W. L. Linton
1 What is Pollution? 297
2 Air Pollution 299
3 Liquid Effluent Control 300
4 Solid Waste Disposal 301
5 Integrated Pollution Control 302
6 Employee Protection 304
7 Carcinogens 305
8 Actions by the Process Industries 307

Chapter 16 Organometallic Compounds in the Environment 309
J. R. Ashby and P. J. Craig
1 Introduction 309
1.1 Scope 309
1.2 Source Material 310
1.3 Units and Abbreviations 311
2 Organotin Compounds 311
2.1 Use and Toxicity 311
2.1.1 Triorganotin Compounds as Biocides 312
2.1.2 Mono- and Diorganotin Compounds as Catalysts or Stabilizers 316
2.2 Detection and Transformation of Organotin Compounds in the Environment 316
3 Organolead Compounds 320
3.1 Use and Toxicity 320
3.2 Detection and Transformations in the Environment 321
4 Organomercury Compounds 328
4.1 Uses and Toxicity 328
4.2 Detection and Transformation in the Environment 330
5 Other Organometallic Compounds 335
5.1 Use and Toxicity 335
5.2 Detection and Formation in the Environment 336

Chapter 17 Radioactivity in the Environment 343
C. N. Hewitt
1 Introduction 343
2 Radiation and Radioactivity 343

2.1 Types of Radiation 343
2.2 The Energy Changes of Nuclear Reactions 345
2.3 Rates of Radioactive Decay 346
2.4 Activity 346
2.5 Radioactive Decay Series 347
2.6 Production of Artificial Radionuclides 348
2.7 Nuclear Fission 348
2.8 Beta Decay of Fission Products 349
2.9 Units of Radiation Dose 350
2.9.1 Absorbed Dose 350
2.9.2 Dose Equivalent 350
2.9.3 Effective Dose Equivalents 350
2.9.4 Collective Effective Dose Equivalents 350
3 Biological Effects of Radiation 351
3.1 General Effects 351
3.2 Biological Availability and Residence Times 352
4 Natural Radioactivity 352
4.1 Cosmic Rays 352
4.2 Terrestrial Gamma Radiation 353
4.3 Radon and its Decay Products 353
4.4 Radioactivity in Food and Water 354
5 Medical Applications of Radioactivity 355
6 Pollution from Nuclear Weapons Explosions 355
7 Pollution from Electric Power Generation Plant and other Nuclear Reactors 357
7.1 Emissions Resulting from Normal Reactor Operation 357
7.1.1 Uranium Mining and Concentration 357
7.1.2 Purification, Enrichment, and Fuel Fabrication 357
7.1.3 Reactor Operation 358
7.2 Pollution Following Reactor Accidents 360
7.2.1 Windscale, 1957 360
7.2.2 Idaho Falls, 1961 360
7.2.3 Three Mile Island, 1979 360
7.2.4 Chernobyl, 1986 361
7.3 Radioactive Waste Treatment and Disposal 363
7.3.1 Low Level Waste 363
7.3.2 Intermediate Level Waste 363
7.3.3 High Level Waste 364
7.4 Fuel Reprocessing 364
8 Pollution from Non-nuclear Processes 365
9 Bibliography 365

Chapter 18 Quantitative Systems Methods in Evaluation of Environmental Pollution Problems 367
P. C. Young
1 Introduction 367
2 Modelling the Dispersion of Pollution in a River System 368
2.1 Conventional Modelling *vs.* the Systems Approach 368
2.2 Mathematical Development of the ADZ Model 373
2.3 The Problem of Model Order Identification 376
2.4 Analysis of the River Conder Trace Data 377
2.5 The Wider Implications of the ADZ Model 379
2.6 System Theoretic Considerations 380
3 A Typical Multivariable System Model Based on the ADZ concept: DO–BOD Dynamics in a Non-tidal Stream 381
4 A General Systems Approach to Modelling Environmental Pollution Processes 383
5 Discussion and Conclusions 386
6 Bibliography 388

Subject Index 389
