Table of contents

Preface 9

1. Introduction 11

2. Protection of natural waters — a public duty 14

3. Terminology 21

4. Principles of energy and materials balances in natural waters 25

4.1 Relationships between the hydrography of different types of bodies of water and eutrophication 26

4.1.1 The mountain stream 26

4.1.2 The meadow stream 27

4.1.3 Slow-flowing streams and rivers 27

4.1.4 Impounded rivers 29

4.1.5 Irrigation channels in the tropics 30

4.1.6 Estuaries 30

4.1.7 Stratified lakes and reservoirs 32

4.1.8 Non-stratified shallow lakes (or meres) and ponds 34

4.1.9 Flooded mineral workings 36

4.2 Physical factors affecting productivity 37

4.2.1 Light 37

4.2.2 Temperature and stratification 44

4.3 Chemical factors affecting productivity 48

4.3.1 Oxygen 48

4.3.2 Inorganic carbon 52

4.3.3 Phosphorus 56

4.3.4 Nitrogen 61

4.3.5 Further chemical factors 68

4.3.5.1 Sulphur 68

4.3.5.2 Silica 69

4.3.5.3 Metals 69

4.3.5.4 Organic carbon 71

5. Estimation of the status and classification of a body of water 74
5.1 Parameters involved 74
5.2 Determination of hydrographic and topographical criteria 75
5.3 Determination of the trophic criteria 78
5.4 Determination of the salt content, and other special and health-related criteria. 81
5.5 Assignment of permissible uses 83
5.6 Performing the classification 83
5.6.1 Obtaining data 83
5.6.2 Determination of the class rating. 87
5.7 Other eutrophication indices and ecological assessment schemes for a body of water 88

6. Predicting changes in water quality 93
6.1 Nutrient supply and primary productivity 93
6.2 Ecosystem modelling 94
6.2.1 Depletion model of deep-level abstraction 94
6.2.2 Nutrient elimination in static waters. 95
6.2.3 Short-term phytoplankton forecast 95
6.2.4 Eutrophication model for shallow bodies of water. 95
6.2.5 Eutrophication model for stratified bodies of water 96
6.2.6 Representative scale model 98

7. Eutrophication — causes and effects 116
7.1 Sources of nutrient pollution 116
7.2 Effects of eutrophication 121
7.3 Development of massive algal growths and the preparation of drinking water 124
7.3.1 Massive growth of planktonic algae 124
7.3.2 Disruption of drinking-water supply caused by massive algal growths 126
7.4 Odour and taste problems due to microorganisms — their occurrence, composition and effects 131

8. Rehabilitation of static bodies of water 138
8.1 Current state of developments worldwide 138
8.2 Methods for rehabilitation of static waters and the effects on the ecosystem. 145
8.3 Official powers governing water use 145
8.3.1 Legal approvals procedure. 145
8.3.2 Supplementary conditions for performing rehabilitation . . . 147
8.3.3 Protected zones. 147
8.3.4 Statutory controls 147
8.3.5 Nature conservation. 147
8.3.6 Territorial development plans 148

9. Restricting undersirable inputs to static bodies of water 149
9.1 'Advanced treatment' of sewage 149
9.2 Diversion of sewage away from the catchment area 155
9.3 Land cultivation with reduced nutrient runoff 156
9.4 Treatment of the inflow 160
9.5 Rationalized use of water 163
9.6 Control of traffic in noxious materials 167

10. Biological measures for control of materials balances in bodies of water . . 170
10.1 Biomanipulation (biomelioration) 170
10.1.1 Control of the animal food chain 170
10.1.2 Control of plant competition 177
10.2 Biological nutrient removal 183

11. Chemical and physical methods for controlling material balances 192
11.1 Phosphate coagulation in natural waters 192
11.1.1 Typical examples from East Germany 197
11.2 Other coagulants 201
11.3 Sediment conditioning 203
11.4 Dilution, flushing 211
11.5 Selective take-off 213
11.6 Increasing the water depth 224
11.7 Changing the flow characteristics 227
11.8 Light screening 228

12. Rehabilitation methods for counteracting water quality impairment 231
12.1 Desludging and removal of debris 231
12.2 Destratification 241
12.3 Surface aeration 250
12.4 Deep-level aeration 253
12.5 Chemical oxygen supply and oxygenation 263
12.6 Neutralization 264

13. Suppression of organisms as a rehabilitation measure 267
13.1 Mechanical methods for organism control 267
13.2 Chemical control of aquatic organisms 270
13.3 Biological control of organisms 276

14. Conclusions and future prospects 278
