Foreword	
1 Problems and Opportunities	1
Our inheritance	1
Industrialisation	1
A change of heart	3
The future	3
How to use this book	4
Box 1.1 The global metropolis	5
2 Setting the Scene	7
Natural Rivers	7
The natural water cycle	7
Living rivers	12
From prehistory to the modern day	16
The catchment today	17
Demands for water	18
Floods	19
Pollution from fields	20
Acid attack	22
Damage to wildlife	23
Urban rivers	23
The fall and rise of London's river	25
Reclamation of the marshes	27
Improved sanitation	27
The solution: transfer the problem downstream	28
The river dies	28
Towards recovery	29
Box 2.1 Water in the UK	10
Box 2.2 Energy, oxygen and food chains	12
Box 2.3 Past changes of climate	17
Box 2.4 Groundwater depletion and rebound	18
Box 2.5 Floods return	20
Box 2.6 Problems with algae	21
Box 2.7 Acid water	22
Box 2.8 Threatened species	23
Box 2.9 Sewage decomposition	25
Box 2.10 Death of the Fleet	26

3 Urban Areas Today: Problems and Solutions	31
The urban water cycle	33
Urban water pollution	37
The treatment of domestic waste water	41
Industrial waste waters	45
Industrial waste water treatment	46
Diffuse pollution	49
Green spaces in urban areas	49
Contaminated land	50
Wrong connections	54
New stresses on urban rivers	57
Increased flood risks	57
Local flooding	57
Large river flooding	58
Aesthetics, amenity and nature conservation	63
Returning river corridors to nature	64
Project Kingfisher, River Cole	65
Sustaining biodiversity	66
Water works and nature conservation	69
Advancing corridor restoration	69
Box 3.1 Reducing domestic water use	32
Box 3.2 Collecting rain	33
Box 3.3 Pollutant types and sources	36
Box 3.4 Oil care	38
Box 3.5 Industrial accidents	38
Box 3.6 Bioassessment of rivers	40
Box 3.7 Bioaccumulation	41
Box 3.8 Sewage treatment	42
Box 3.9 Chicago's recovering waterways	44
Box 3.10 Using waste water	44
Box 3.11 Cleaning up the River Tees	46
Box 3.12 The future of waste water treatment	47
Box 3.13 Activities with the potential to contaminate the ground	51
Box 3.14 New water quality problems	55
Box 3.15 Sustainable urban drainage systems (SUDS)	56
Box 3.16 Maidenhead flood relief scheme	60
Box 3.17 The Bittern	62
Box 3.18 Aliens invade	67
Box 3.19 Sewage treatment works	68
Box 3.20 The River Skerne restoration	70

- 4 Sustainable urban rivers** 73
- Planning for the environment** 73
- River flood plains** 74
- Planning in practice** 78
 - Tyneside and Wearside 78
 - The Medway riverside 80
- Public participation** 81
- Catchment planning** 86
- Setting standards** 86
- Regulation** 89
 - Points of control 91
- Reporting back to the public – access to information** 91
- The Mersey Basin – integrated management in action** 94
 - Box 4.1** Sustainable development 74
 - Box 4.2** Local Authority Planning 76
 - Box 4.3** Holme Pierrepont National Water Sports Centre 79
 - Box 4.4** Edinburgh's key asset: the Water of Leith 82
 - Box 4.5** Monitoring and enforcement 88
 - Box 4.6** Pollution on the Tyne 90
 - Box 4.7** Gaining access to information 92
- 5 Challenges for Urban Revival** 99
- Opportunities for revival** 101
 - Waterfront regeneration 103
 - Making the best use of river corridors 104
 - The role of science and technology 106
 - An uncertain future 106
- The international perspective** 111
 - Box 5.1** Planning to face the river in south-east England 100
 - Box 5.2** Nature in the city 102
 - Box 5.3** The City of Stoke-on-Trent Rivers Strategy 106
 - Box 5.4** Regional opportunities for urban water re-use 108
 - Box 5.5** Too little too late? 109
 - Box 5.6** Water City International 113
 - Box 5.7** The Landcare movement in Australia 114
- Bibliography** 116
