DES WALLING

Department of Geography, University of Exeter, Exeter EX4 4RJ, UK

Papers selected from the Workshop on Erosion and Sediment Transport Measurement in Rivers: Technological and Methodological Advances held in Oslo, Norway, 19–21 June 2002. The Workshop was convened by the International Commission of Continental Erosion of the International Association of Hydrological Sciences, and sponsored by the Norwegian Water Resources and Energy Directorate.

Contents

Preface v
by Jim Bogen, Tharan Fergus & Des Walling

1 Suspended Sediment

A new definition of suspended sediment: implications for the measurement and prediction of sediment transport *Ian G. Droppo* 3

Turbidity-controlled sampling for suspended sediment load estimation *Jack Lewis* 13

Testing laser-based sensors for continuous *in situ* monitoring of suspended sediment in the Colorado River, Arizona *Theodore S. Melis, David J. Topping & David M. Rubin* 21

Continuous measurement of suspended-sediment discharge in rivers by use of optical backscatterance sensors *David H. Schoellhamer & Scott A. Wright* 28

Measuring suspended sediment characteristics using a LISST-ST in an embanked flood plain of the River Rhine *Ivo Thonon & Marcel Van Der Perk* 37

Modelling and monitoring flow and suspended sediment transport in lowland river flood plain environments *A. P. Nicholas* 45

2 Erosion and Sediment Sources in Catchments

Using environmental radionuclides as tracers in sediment budget investigations *D. E. Walling* 57

Sediment transport in agricultural catchments—the need for methods to trace sediment sources *Lillian Øygarden, Johannes Deelstra, Hans Olav Eggestad & Stine Marie Vandsemb* 79

Application of an improved PEEP system to bank erosion investigations on the River Wharfe, UK *Damian M. Lawler* 88

Development of a sediment yield model for Ghana using sediment transport data *Mark Bambury & John Elgy* 96

Suspended and bed load sediment transport dynamics in two lowland UK streams—storm integrated monitoring *D. J. Evans, P. J. Johnes & D. S. Lawrence* 103

3 Bed Load Monitoring and Transport Processes

Perspectives on bed load measurement *P. Ergenzinger & C. de Jong* 113

Sampler size and sampling time affect bed load transport rates and particle sizes measured with bed load traps in gravel-bed streams *Kristin Bunte & Steven R. Abt* 126

The continuous monitoring of bed load flux in various fluvial environments *Jonathan B. Laronne, Yulia Alexandrov, Nathaniel Bergman, Hai Cohen, Celso Garcia, Helmut Habersack, D. Mark Powell & Ian Reid* 134

Event bed load yield measurement with load cell bed load traps and prediction of bed load yield from hydrograph shape *D. A. Sear* 146

Sediment monitoring of glacial rivers in Iceland: new data on bed load transport *Jórunn Hardardóttir & Árni Snorrason* 154

An assessment of the accuracy of the Spatial Integration Method (SIM) for estimating coarse bed load transport in gravel-bedded streams using tracers *D. A. Sear, M. W. E. Lee, P. A. Carling, R. J. Oakey & M. B. Collins* 164

Use of radio-tracking techniques in bed load transport investigations *Helmut M. Habersack* 172

Bed load measurements with a new passive acoustic sensor *Jim Bogen & Knut Møen* 181

Acoustic gravel-transport sensor: description and field tests in Little Granite Creek, Wyoming, USA *John Downing, Paul J. Farley, Kristin Bunte, Kurt Swingle, Sandra E. Ryan & Mark Dixon* 193

Monitoring bed load transport using acoustic and magnetic devices *Wojciech Froehlich* 201

Bed load measurements with a passive magnetic induction device *Allen S. Gottesfeld & Jon Tunnicliffe* 211

Measurement of bed load with the use of hydrophones in mountain torrents *Takahisa Mizuyama, Masaharu Fujita & Michinobu Nonaka* 222

An instrument to record sediment movement in bedrock channels *K. Richardson, I. Benson & P. A. Carling* 228
