On irrigation efficiencies

Fourth edition

M.G. Bos
J.Nugteren

66/ 81378

Publication 19

International Institute for Land Reclamation and Improvement/ILRI,
P.O. Box 45, 6700 AA Wageningen, The Netherlands, 1990

F 6665

Contents

1 Introduction 9

2 Definition of the problem 10

3 Method of investigation applied 12

4 Data processing 14

4.1 Grouping of areas 14
4.2 Definitions of efficiencies 15
4.3 Calculating the efficiencies 20
4.4 Efficiency terminology and reuse 22
4.5 Accuracy of the calculated efficiencies 23

5 Some results not directly related to irrigation efficiency 25

5.1 Field irrigation method versus irrigated area 25
5.2 Farm size distribution 25
5.3 Number of farms served by group inlets 29
5.4 Project staffing 31

6 Analysis and evaluation of the data from the questionnaire with respect to irrigation efficiency 33

6.1 Conveyance efficiency 33
6.1.1 Conveyance efficiency versus average irrigable area 33
6.1.2 Conveyance efficiency versus size of rotational unit 35
6.1.3 Conveyance efficiency as a function of technical equipment 36
6.2 Distribution efficiency 37
6.2.1 Distribution efficiency versus farm size and soil type 39
6.2.2 Distribution efficiency versus duration of delivery period 40
6.2.3 Farm inlet versus group inlet 43
6.3 Field application efficiency 43
6.3.1 Influence of field irrigation method on field application efficiency 44
6.3.2 Effect of depth of application on e_a 47
6.3.3 Field application efficiency versus farm size and soil type 48
6.3.4 Influence of farm flow rate on application efficiency 49
6.4 Tertiary unit efficiency 50
6.4.1 Influence of flow rate at farm inlet on tertiary unit efficiency 52
6.4.2 Relation of water charges to tertiary unit efficiency 52
6.4.3 Relation of tertiary unit efficiency to method of water supply to the farm 54
6.5 Irrigation system efficiency 55

6.5.1 Relation of irrigation system efficiency to actually irrigated area 56
6.5.2 Influence of project management on irrigation system efficiency 57
6.6 Overall or project efficiency 57

7 Practical application of the study results with some examples 59

8 Evaluation of the applied approach 65

9 Conclusions and recommendations 67

10 References 69

Appendix I Example of a completed questionnaire 70
Appendix II Forms used to calculate water utilization efficiencies 87
Appendix III Tables of basic data as supplied by the questionnaires 91
Appendix IV The influence of uniformity and leaching on the field application efficiency 106
Appendix V Efficiency related terms 115
