CONTENTS

PREFACE 9

1. INTRODUCTION: RECENT TRENDS IN SCIENCE 13
   1.1. How Did It start? 13
   1.2. Physics versus Ecology 15
   1.3. Ecology and Physics 17
   1.4. Recent Trends in Science 19
   1.5. The Ecosystem as Object of Research 22

2. DO WE NEED A NEW, HOLISTIC ECOLOGY? 25
   2.1. Two Ecologies 25
   2.2. Complexity of Ecosystems 31
   2.3. Ecology and Quantum Theory 54
   2.4. Holism versus Reductionism 58

3. MODELS IN ECOLOGY 63
   3.1. Modelling in Ecology 63
   3.2. Modelling Elements 66
   3.3.The Modelling Procedure 70
   3.4. Types of Models 79
   3.5. Complexity of Models 84
   3.6. Modelling Constraints 89
   3.7. Application of Models as Scientific, Experimental Tools 91

4. ENERGY AND ECOLOGY 97
   4.1. Conservation of Energy and Matter 97
   4.2. Energy Flows in Ecosystems 109
   4.3. The Maximum Power Principle 114
   4.4. Embodied Energy/ Emergy 118

5. ENTROPY AND ECOLOGY 123
   5.1. The Second Law of Thermodynamics Applied to Ecosystems. 123
   5.2. Information and Entropy 126

5.3. Ecosystems Generate Entropy..... 131
5.4. Ecosystems are Non-isolated Systems..... 134
5.5. Energy Sources and Sinks establish Order..... 139
5.6. Self-organization..... 147
5.7. The Maximum Entropy or Maximum Energy Dissipation Theory..... 149

6. EXERGY AND ECOLOGY..... 157
6.1. The Application of Exergy in Ecological Thermodynamics..... 157
6.2. Exergy and Information..... 162
6.3. Application of Exergy in Ecosystem Theory..... 170
6.4. Exergy and Modelling..... 179
6.5. The Fourth or Ecological Law of Thermodynamics..... 186

7. NETWORK AND HIERARCHICAL CONCEPTS OF ECO-SYSTEMS..... 201
7.1. Networks in Ecology..... 201
7.2. Network Concepts..... 202
7.3. Hierarchical Theory of Ecosystems..... 207
7.4. Network Thermodynamics..... 216

8. UTILITY THEORY, INDIRECT EFFECT AND ASCENDENCY..221
8.1. Toward a Wider Application of Network Theory..... 221
8.2. Energy Transfer and Utilization Coefficients in Networks..... 223
8.3. The Indirect Effects in Networks..... 234
8.4. Ascendency..... 245

9. CATASTROPHE THEORY AND ECOLOGY..... 255
9.1. What Is Applied Catastrophe Theory?..... 255
9.2. Application of Catastrophe Theory to Explain Shifts in Oxygen Concentration as Function of Time in a Stream..... 258
9.3. Application of Catastrophe Theory on a Lake Ecosystem..... 265
9.4. General Application of Catastrophe Theory in Ecology..... 270
9.5. Ecosystems and Catastrophe Theory..... 275

10. CHAOS, FRACTALS AND ECOLOGY..... 281
10.1. Introduction and Definitions..... 281

10.2. Bifurcation and Fractal Dimension..... 284
10.3. Ecological Implications..... 288
10.4. Parameter Estimations and Chaos..... 291

11. DYNAMIC OF ECOSYSTEMS..... 299
11.1. Ecosystem Properties..... 299
11.2. Modelling Structural Dynamics..... 300
11.3. Constraints on Ecological Parameters..... 304
11.4. Application of Exergy as Goal Function in Ecological Modelling..... 307
11.5. Structural Dynamic Models of Ecosystems..... 312
11.6. Structural Dynamic Models in Population Dynamics..... 321

12. A TENTATIVE PATTERN OF ECOSYSTEM THEORIES..... 325
12.1. Presentation of a Pattern..... 325
12.2. A Central Law of Ecosystem Theories..... 326
12.3. The Relation to Other Theories..... 335
12.4. Tools: Networks and Models..... 337
12.5. Ecosystem Properties..... 339
12.6. The Application of ELT in Specific Cases..... 344

13. EPILOGUE..... 349

14. APPENDIX 1. DEFINITIONS OF CONCEPTS..... 351

15. REFERENCES..... 353

INDEX..... 381
