List of contents:

	1.	Introduction	7
PART I:	2.	Investigative strategies	9
	2.1	Strategies in other countries	9
	2.1.1	The European Community	9
	2.1.2	OECD	10
	2.1.3	USA	10
	2.1.4	The Netherlands	12
	2.1.5	Germany	12
	2.1.6	United Kingdom	13
	2.1.7	Ireland	13
	2.1.8	Sweden	16
	2.2	Experience with industrial wastewater examination in Denmark	22
	2.2.1	The legal basis	22
	2.2.2	Experience	23
	2.2.3	Baseline information	25
	2.2.4	Evaluation of whole effluent	25
	2.2.5	Evaluation of individual substances	33
	2.3	Setting discharge criteria and monitoring compliance	37
	2.3.1	Setting criteria and control programmes for individual substances	37
	2.3.2	Standard setting and control of compliance for whole effluent	41
PART II:	3.	Evaluation of exposure concentrations	49
	3.1	Characterization of wastewater and its variability	49
	3.1.1	Existing knowledge of variability in industrial wastewater toxicity	49
	3.1.2	Sampling technique and monitoring frequency	58
	3.2	Dilution and distribution in the receiving water	65
	3.2.1	Removal from the water phase	66
	3.2.2	Dilution	67
	3.2.3	Dilution in the effluent plume	68
	3.2.4	Dilution in the recipient	71

	3.2.5	Simulation models	75
	3.2.6	Examples of PEC calculations	80
3.3		Degradability	82
	3.3.1	Intrinsic properties	82
	3.3.2	Biomass	84
	3.3.3	Environmental factors	87
	3.3.4	Methods for studying biodegradability	88
	3.3.5	Evaluating degradability	95
	3.3.6	Examples of stabilization studies	97
3.4		Bioaccumulation	103
	3.4.1	Bioaccumulation of individual substances	106
	3.4.2	Complex mixtures	116
4.		Evaluation of ecosystem effects	127
4.1		Methods for evaluation of ecotoxicity	127
	4.1.1	Measurement of toxicity	131
	4.1.2	Brief description of biotests for acute toxicity	142
	4.1.3	Brief description of biotests for chronic toxicity	144
	4.1.4	Reproducibility of screening tests	146
	4.1.5	Data sources	148
	4.1.6	Prediction of toxicity/QSAR	149
4.2		Assessment of toxicity of chemical substances	156
	4.2.1	Extrapolation between different types of effect on the same species	156
	4.2.2	Comparison of acute toxicities for different species	158
	4.2.3	Extrapolation methods for calculation of protection levels	162
	4.2.4	Evaluation of the extrapolation methods	167
4.3		Evaluation of the toxicity of complex mixtures	177
	4.3.1	Toxicity of mixtures	177
	4.3.2	Investigations of the toxicity of known mixtures	180
	4.3.3	Investigations of the toxicity of complex mixtures	181
	4.3.4	Conclusion	184

4.4	Prediction of no-effect-concentrations on the basis of laboratory tests	186
4.4.1	Effects on ecosystems	187
4.4.2	Investigation of effects of chemical substances on eco-systems	187
4.4.3	Investigation of the effects of whole effluent on ecosystems	191
4.4.4	Conclusion	195

PART III:

5.	Strategy for environmental assessment	197
5.1	Principles for environmental assessment of chemicals	197
5.2	Strategy for investigation and assessment of wastewater	199
5.2.1	Wastewater hazard identification	201
5.2.2	Wastewater hazard assessment	201
5.2.3	Wastewater risk assessment	202
5.2.4	Environmental assessment of effluent	203
5.3	A proposed stepwise investigation programme	205
5.3.1	Assessment of individual substances	205
5.3.2	Assessment of complex wastewater mixtures	206
5.3.3	Conclusion	210
5.4	Strategy for establishing criteria and monitoring compliance	210
5.4.1	Establishing criteria and monitoring compliance: individual substances	210
5.4.2	Establishing criteria and monitoring compliance: whole effluent	211
5.4.3	Establishing discharge criteria on the basis of recipient quality objectives	213
