Contents

FOREWORD IX

1. GROUNDWATER RECHARGE PRINCIPLES, PROBLEMS AND DEVELOPMENTS 1
Ian Simmers
1.1 Introduction 1
1.2 Historical framework 1
1.2.1 Recharge processes 2
1.2.2 Recharge estimation 4
1.3 Challenges in estimating recharge 4
1.3.1 Recharge from precipitation 4
1.3.2 Recharge from intermittent flow 9
1.3.3 Recharge from permanent water bodies 10
1.4 Developments in estimating recharge from precipitation 12
1.5 Concluding remarks 15
References 16

2. RECHARGE FROM PRECIPITATION 19
Jan Hendrickx & Glen Walker
2.1 Introduction 19
2.2 Controls on water movement through the vadose zone 21
2.2.1 Localized recharge 21
2.2.2 Preferential pathway flow 28
2.2.3 Lateral flow 36
2.2.4 Effect of vegetation cover 39
2.3 Physics of water flow in the vadose zone 43
2.3.1 Water flow in porous soils 43
2.3.2 Indirect methods for determining hydraulic properties 46
2.3.3 Flow through stony soils 50
2.3.4 Flow through fractures 51
2.3.5 Vapour flow through dry soil 53

2.4 Solute and isotope movement in the vadose zone 55
2.5 Physical methods for recharge estimation 59
2.5.1 Empirical rainfall-recharge expressions 59
2.5.2 Water balance methods for determining potential recharge 60
2.5.3 Models for determining actual recharge 62
2.5.4 Field determination of recharge fluxes 71
2.5.5 Lysimetry 73
2.6 Tracer methods for recharge estimation 75
2.6.1 Environmental tracers 77
2.6.2 Artificial tracers 86
2.6.3 Bomb tracers 90
2.6.4 Accuracy of tracer methods 91
2.7 A framework for estimating precipitation recharge 94
List of symbols 96
References 98

CASE STUDIES

Recharge from irrigated lands 115
Beekma, J., Kelleners, T.J., Chaudhry, M.R., Boers, Th.M. & Van Dam, J.C.

Modelling of groundwater recharge for a fractured dolomite aquifer under semi-arid conditions 129
Van der Lee, J. & Gehrels, J.C.

3. RECHARGE FROM INTERMITTENT FLOW 145
Gideon Kruseman
3.1 Introduction 145
3.2 Hydrology of intermittent streams 145
3.2.1 Intermittent streams 145
3.2.2 Rainfall 146
3.2.3 Runoff 146
3.2.4 Assessment of surface water resources 148
3.2.5 Erosion 148
3.2.6 Aquifers 149
3.2.7 Groundwater quality 152
3.3 Groundwater recharge processes 152
3.3.1 The recharge phenomenon 152
3.3.2 The infiltration process 153
3.3.3 Flow through the unsaturated zone 154
3.3.4 Recharge of bedrock aquifers 156
3.3.5 Recharge by intermittent streams 157
3.3.6 Recharge of alluvial fans 157
3.3.7 Recharge in valleys and intermontane plains 158
3.4 Estimating recharge 160
3.4.1 General approach 160
3.4.2 Direct measurement 161
3.4.3 Indirect measurements 161

3.4.4 Water budget methods 162
3.4.5 Darcian approaches 164
3.4.6 Tracer techniques 168
3.4.7 Empirical formulae 172
3.4.8 Numerical groundwater flow simulation 174
3.4.9 Rough estimates 174
3.5 Man enhanced recharge 174
3.5.1 Scope 174
3.5.2 Recharge from irrigation 175
3.5.3 Village tanks 175
3.5.4 Artificial recharge 175
3.6 Quantitative field data 179
References 182

CASE STUDIES

Estimation of wadi recharge from channel losses in Tabalah Basin, Saudi Arabia 187
Sorman, A.U. & Abdulrazzak, M.J.

Artificial groundwater recharge practice in Cyprus 201
Iacovides, I.St.

4. RECHARGE FROM PERMANENT WATER BODIES 215
Ken Rushton
4.1 General considerations 215
4.1.1 Introduction 215
4.1.2 Processes 215
4.1.3 Estimation techniques 217
4.1.4 Data collection 217
4.1.5 Further sources of information 218
4.2 Recharge due to infiltration from rivers 218
4.2.1 Introduction 218
4.2.2 Processes in river – aquifer interaction 218
4.2.3 Estimation techniques 221
4.2.4 Data collection 222
4.2.5 Further sources of information 223
4.3 Recharge from canals 223
4.3.1 Introduction 223
4.3.2 Flow processes 224
4.3.3 Estimation techniques 226
4.3.4 Data collection 231
4.3.5 Further sources of information 232
4.4 Recharge due to losses from flooded rice irrigation 233
4.4.1 Introduction: Why is water lost from rice fields? 233
4.4.2 Flow processes from rice field bund into an aquifer 235
4.4.3 Estimation techniques 236
4.4.4 Data collection 240
4.4.5 Further sources of information 240

4.5 Recharge from lakes 241
4.5.1 Introduction 241
4.5.2 Flow processes 241
4.5.3 Estimation techniques 242
4.5.4 Data collection 243
4.5.5 Further sources of information 245
4.6 Urban recharge 245
4.6.1 Introduction 245
4.6.2 Formulation 246
4.6.3 Estimation techniques 247
4.6.4 Data collection 247
4.6.5 Further sources of information 248
4.7 Artificial recharge 248
4.7.1 Introduction 248
4.7.2 Processes 249
4.7.3 Estimation techniques 252
4.7.4 Data collection 252
4.7.5 Further sources of information 253
List of symbols 253
References 254

CASE STUDIES

Losses from canals in Pakistan 259
Bhutta, M.N., Javed, I. & Dukker, P.

Efficiency of artificial recharge from percolation tanks 271
Mehta, M. & Jain, S.K.

Cover photograph: Conditions for localized recharge after a heavy rainstorm in the summer of 1996 at the Jornada Basin in the Chihuahuan Desert 25 km north of Las Cruces, New Mexico, USA. Photograph by John P. Anderson, New Mexico State University.

Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by A.A. Balkema, Rotterdam, provided that the base fee of US$1.50 per copy, plus US$0.10 per page is paid directly to Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA. For those organizations that have been granted a photocopy license by CCC, a separate system of payment has been arranged. The fee code for users of the Transactional Reporting Service is for the hardbound edition: 90 5410 694 8/97 US$1.50 + US$0.10, and for the paper edition (IAH member): 90 5410 695 6/97 US$1.50 + US$0.10.
